# Engineered for Performance Designed for Living

Brand established  
Working from 2024  
until now

## Our Brand Values

At UNISPEC, we believe that flooring and wall solutions are more than finishes – they are the foundation of every space. Born from advanced manufacturing expertise, UNISPEC specializes in Stone Plastic Composite (SPC) flooring and wall coverings engineered for strength, durability, and timeless appeal.

Our products are developed to meet the highest international standards, offering a balance of technical performance and aesthetic excellence. From residential interiors to large-scale commercial projects, UNISPEC solutions are trusted by developers, architects, and contractors across the Middle East and beyond.

What sets us apart is our commitment to precision engineering and consistent quality. Every plank and panel is manufactured with care, ensuring resistance to moisture, wear, and impact while maintaining a natural look and feel. With a wide portfolio of wood-inspired, stone-inspired, and premium embossed-in-register (EIR) collections, we provide design flexibility without compromising performance.

At UNISPEC, we don't just deliver products – we deliver confidence. Confidence in every installation, every specification, and every project.

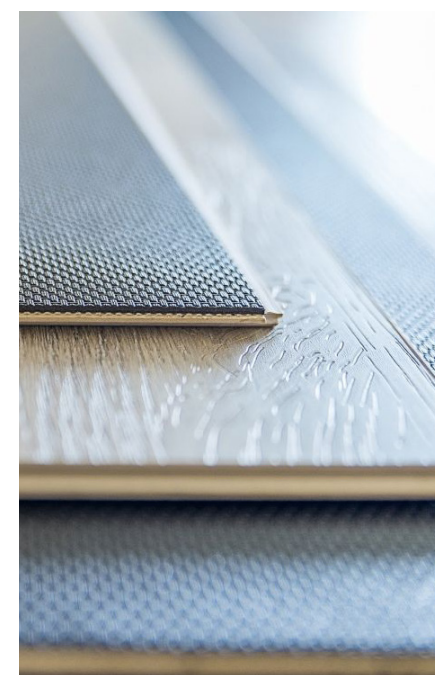

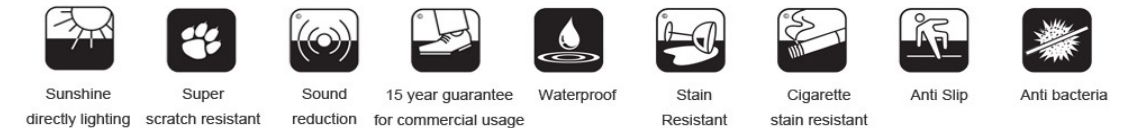

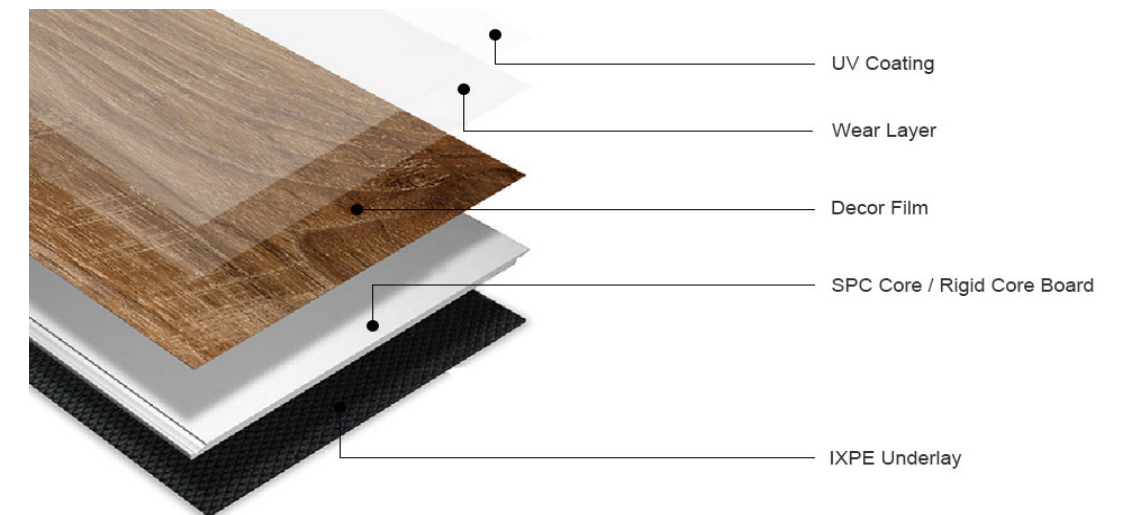

Great spaces are built on strong foundations — at UNISPEC, we design surfaces that stand the test of time.

UNISPEC delivers engineered SPC flooring and wall solutions that unite precision, durability, and design. Inspired by nature and perfected by technology, our collections bring timeless materials into modern spaces with confidence and ease.

## Why SPC?

### A Technology That Lasts

Stone Plastic Composite (SPC) technology represents the next generation of resilient surfaces. Built from a high-density limestone and polymer core, SPC flooring and wall coverings deliver exceptional stability, strength, and dimensional accuracy. Unlike traditional materials, SPC is designed to resist expansion, contraction, moisture, and impact – making it ideal for diverse climates and demanding applications.

[www.unispec.co](http://www.unispec.co)

Strength You Can Trust.  
Design You Can Feel.

**Dimensional Stability**

SPC's rigid limestone-polymer core ensures minimal expansion or contraction, making it ideal for varying temperatures and humidity.

**Waterproof & Moisture-Resistant**

Unlike wood or laminate, SPC does not absorb water — perfect for kitchens, bathrooms, basements, and humid climates.

**Durability & Wear Resistance**

The multi-layer construction with a UV-protected wear layer resists scratches, stains, dents, and heavy foot traffic.

**Easy Installation**

Precision click-lock technology allows for quick, glue-free installation, reducing labor costs and downtime on-site.

**Comfort & Acoustics**

IXPE underlayment provides improved sound absorption and underfoot comfort.

**Design Versatility**

High-definition printing and EIR (Embossed-in-Register) textures replicate wood and stone with remarkable realism.

“

**PATENTED  
TECHNOLOGY**

Unilin's flooring innovations hinge on engineering precision and trusted reliability. Their Uniclic patented click system ensures easy, glue-free installation with tight, seamless joints—trusted globally across SPC, LVT, laminate, and engineered wood products. Paired with their new hybrid core technology, featuring magnesium-oxide reinforcement, Unilin continues to redefine how durable and dimensionally stable modern flooring can be.

**The Power  
of Innovation**

UNISPEC sets itself apart through the integration of globally recognized patented technologies that redefine how flooring and wall solutions perform on-site. Uniclic introduced a new era of installation by eliminating glue and creating a seamless, tight click system that ensures strength and accuracy with every plank. Building on this innovation, Unidrop provides a drop-down locking method designed for speed and reliability, especially in large-scale commercial projects where efficiency is critical. Unizip takes simplicity even further, offering a one-panel locking solution that reduces handling while maintaining a secure, flawless finish. Finally, Flintile extends these advantages to tile applications, allowing ceramic-look products to be installed as quickly and cleanly as SPC planks. Together, these patented systems form the backbone of UNISPEC's promise: surfaces that combine advanced engineering with everyday practicality, ensuring durability, beauty, and effortless installation across every project.

# Technology with Purpose

Benefits You Can See,  
Applications You Can Trust.

SPC technology was developed to meet the demands of diverse environments, combining resilience, stability, and design flexibility. At UNISPEC, our collections are engineered to adapt seamlessly across residential, commercial, hospitality, healthcare, and decorative applications, offering solutions that are both practical and inspiring.

**Residential Spaces**

In homes, SPC provides the perfect balance of style and durability. Its waterproof core makes it ideal for kitchens and bathrooms, while realistic wood and stone finishes bring warmth and character to living rooms, bedrooms, and open-plan spaces. Easy installation and low maintenance make it a favorite choice for homeowners.

**Commercial Interiors**

Offices, retail shops, and showrooms demand materials that withstand high traffic while maintaining a polished look. SPC’s rigid core and wear resistance ensure long-lasting performance, while modern design options enhance the professional atmosphere of any workspace.

**Hospitality & Leisure**

Hotels, restaurants, gyms, and entertainment venues rely on SPC for its ability to deliver luxury aesthetics with practical durability. From lobbies and corridors to dining areas and fitness floors, SPC adapts to the fast-paced demands of hospitality design.

**Healthcare & Education**

Cleanliness and safety are critical in hospitals, clinics, and schools. SPC surfaces are hygienic, easy to sanitize, and resistant to spills or impact, ensuring reliable performance in spaces where health and safety come first.

**Wall Applications**

Beyond flooring, SPC is also an exceptional solution for walls and decorative features. With textures ranging from wood grains to stone effects, it transforms lobbies, reception areas, and accent walls into statement pieces, adding depth and refinement to interiors.

# Shaping Spaces Across Industries.

## Our Collections

At UNISPEC, every collection is designed with a clear purpose: to combine advanced SPC technology with the timeless beauty of natural materials. Our products are grouped into three distinct categories – Wood Look, Stone Look, and Premium Line – each crafted to meet different design visions and performance needs. From the warmth and authenticity of natural wood grains, to the strength and sophistication of stone textures, and the enhanced realism of our premium embossed-in-register finishes, UNISPEC offers a complete spectrum of solutions. Together, these categories ensure that whether the project is residential, commercial, or hospitality, there is a UNISPEC surface that delivers both aesthetic excellence and enduring performance.

## Origin

Where every design begins. The Origin Collection draws on the natural warmth of wood, capturing its grains, tones, and textures with engineered precision. From timeless classics to modern finishes, Origin transforms interiors with surfaces that feel as authentic as nature, yet perform with the reliability of SPC technology.

---

## Core

Strength at the heart of every space. The Core Collection reimagines stone, concrete, and mineral textures with architectural depth and durability. Defined by stability, weight, and timeless appeal, Core surfaces bring solidity and sophistication to residential, commercial, and hospitality projects alike.

---

## Apex

The pinnacle of surface design. The Apex Collection showcases our most advanced technologies – including EIR textures and exclusive finishes delivering unmatched realism and premium performance. Apex is where engineering and elegance converge, offering the ultimate expression of SPC innovation.

TRUEGRAIN  
TECHNOLOGY

# TRUEGRAIN

## TECHNOLOGY

At UNISPEC, innovation is not only about durability – it is also about realism. TrueGrain Technology is our advanced surface system that recreates the natural depth of wood and stone with precision. By aligning texture with the printed design, every plank captures the details of nature – from the ridges of oak grain to the subtle veins of marble.

Unlike conventional embossing, TrueGrain ensures that what you see perfectly matches what you touch. The result is a surface that feels as authentic as it looks – warm, tactile, and unmistakably real. This technology elevates interiors with a premium experience, giving designers, architects, and homeowners the confidence of choosing surfaces that deliver both visual beauty and tactile integrity.
